Course Descriptions /Objective :

The objective of the course for students is to introduce neuroendocrine-immune circuitry from the view of brain immune privilege, neuroendocrine system, brain nerve-driven immunity, innervation of immune system, meningeal lymphatic system, circumventricular organs, barriers and the neurovascular unit of brain, cerebrospinal fluid system, glymphatic system, and the interstitial system in pathophysiological conditions. Students will be able to understand that basic knowledge that the brain interacts with peripheral endocrine and immune system, to maintain physiological homeostasis or progress brain diseases.

Course Materials:

The Wiley-Blackwell handbook of psychoneuroimmunology / Alexander W. Kusnecov and Hymie Anisman, 2014; An introduction to neuroendocrinology / Michael Wilkinson, Richard E. Brown, 2015; Glia / Ben A. Barres, 2018; Neuron-Glia Interaction in Neuroinflammation, Akio Suzumura / Kazuhiro Ikenaka, 2013; The relevant published materials.

Grading Criteria:

Student participation and punctuality (70%) and PBL assignment and panel discussion (30%)
